mass media regarding language development, with particular reference influence of television. first piece of research to be examined was conducted in England in by H. T. Himmelweit, A. N. Oppenheim & P. Vince. They discovered. Media language has always attracted the attention of linguists, particularly applied linguists and sociolinguists. There are four practical and principled reasons for this interest. First, the media provide an easily accessible source of language data for research and teaching purposes. Second, the media are important linguistic institutions. Their output makes up a large proportion of the language that people hear and read every day. Media usage reflects and shapes both language use and attitudes in a speech community. Welcome to The Language of the Media, a booklet designed to introduce you to some of the styles of English you will hear when listening to BBC World Service. The aim of this booklet is to help you become a more effective listener in English. We hope you enjoy The Language of the Media and find that the extracts and exercises help improve your listening skills. 1. The language of headlines. What is a headline?
