The Institute for Scientific Information (ISI) was an academic publishing service, founded by Eugene Garfield in Philadelphia in 1956. ISI offered scientometric and bibliographic database services. Its specialty was citation indexing and analysis, a field pioneered by Garfield. ISI maintained citation databases covering thousands of academic journals, including a continuation of its longtime print-based indexing service the Science Citation Index (SCI), as well as the Social Sciences Citation Index. The Science Citation Index from the Institute for Scientific Information (ISI, now part of Thomson Reuters) under the leadership of Eugene Garfield was for many years the sole information source for use by experts for specialist analyses. Accessibility improved in 2002, when Thomson Reuters launched an integrated web platform, making the Web of Science database widely accessible, and coverage was improved with the inclusion of indices for social sciences and the arts and humanities. Combining information on leadership for international collaborations and documents involving a single country, it is possible to derive a more complete picture of a country's integration in the global scientific landscape.
