<b>PART I A Simple Introduction to Complex Event Processing</b>	<b>1</b>
<b>1 The Global Information Society and the Need for New Technology</b>	<b>3</b>
1.1 Distributed Information Systems Everywhere	4
1.2 The Global Communication Spaghetti Pot	7
1.2.1 Event Causality	10
1.3 Electronic Archeology: Layers upon Layers	10
1.3.1 A Layered Enterprise System	11
1.3.2 Vertical Causality: Tracking Events up and down the Layers	15
1.3.3 Event Aggregation: Making High-Level Sense out of Low-Level Events	16
1.4 The Gathering Storm of New Activities on the Web	17
1.5 Global Electronic Trade	18
1.6 Agile Systems	21
1.7 Cyber Warfare and the Open Electronic Society	23
1.8 Summary: Staying ahead of Chaos	26
<b>2 Managing the Electronic Enterprise in the Global Event Cloud</b>	<b>27</b>
2.1 How the Global Event Cloud Forms	28
2.1.1 The Open Enterprise	28
2.1.2 The Global Event Cloud	28
2.1.3 The Electronic Enterprise	29
2.2 Operating in the Global Event Cloud	30
2.3 Going Beyond Workflow	33
2.4 Parallel and Asynchronous Processes	35
2.5 On-the-Fly Process Evolution	37

2.6 Exceptions Must Be First-Class Citizens in Process Design	39
2.7 Summary: Managing the Electronic Enterprise	41
<b>3 Viewing the Electronic Enterprise—Keeping the Human in Control</b>	<b>43</b>
3.1 Today's Event Monitoring Is Too Primitive	44
3.1.1 System Monitoring Focuses on the Network Layer	44
3.1.2 Network-Level Monitoring Doesn't Even Solve Network Problems	45
3.2 An Example of Causal Tracking	46
3.3 Information Gaps	49
3.3.1 Examples of Information Gaps	50
3.4 Problem-Relevant Information	51
3.5 Viewing Enterprise Systems	53
3.6 Creating and Coordinating Multiple Views	55
3.7 Hierarchical Viewing	56
3.7.1 An Example of Hierarchical Viewing	57
3.8 Summary: Viewing the Electronic Enterprise	59
<b>4 Designing the Electronic Enterprise</b>	<b>61</b>
4.1 Process Architectures	62
4.2 Roles of Architecture in the Process Lifecycle	63
4.3 Constituents of Process Architectures	67
4.3.1 Annotations	67
4.3.2 Architectural Structure	68
4.3.3 Interface Communication Architectures	68
4.3.4 Architecture Diagrams	70
4.3.5 Behavior Specification	72
4.3.6 Design Constraints	74
4.4 Examples of Informal Annotations	74
4.5 Dynamic Process Architectures	78
4.5.1 Diagrams for Dynamic Architectures?	81
4.6 Layered Architectures and Plug-and-Play	81
4.6.1 Abstraction Principle	83
4.7 Summary: Technology to Support Process Architecture	84
<b>5 Events, Timing, and Causality</b>	<b>87</b>
5.1 What Events Are	88
5.2 How Events Are Created	90

---

5.3 Time, Causality, and Aggregation	94
5.3.1 The Cause-Time Axiom	96
5.4 Genetic Parameters in Events	96
5.4.1 Timestamps	96
5.4.2 Causal Vectors	97
5.5 Time	97
5.6 Causality and Posets	100
5.7 Causal Event Executions—Real-Time Posets	102
5.8 Orderly Observation	109
5.9 Observation and Uncertainty	110
5.10 Summary	111
<b>6 Event Patterns, Rules, and Constraints</b>	<b>113</b>
6.1 Common Kinds of Pattern Searching	113
6.2 Event Patterns	114
6.3 A Strawman Pattern Language	116
6.3.1 Pattern Matching	117
6.3.2 Writing Patterns in STRAW-EPL	117
6.4 Event Pattern Rules	119
6.5 Constraints	124
6.6 Summary	126
<b>7 Complex Events and Event Hierarchies</b>	<b>127</b>
7.1 Aggregation and Complex Events	127
7.2 Creating Complex Events	129
7.3 Event Abstraction Hierarchies	131
7.3.1 Viewing a Fabrication Line	132
7.4 Building Personalized Concept Abstraction Hierarchies	133
7.4.1 Viewing Network Activity	134
7.4.2 Viewing Stock-Trading Activity	138
7.5 Summary	141
<b>PART II Building Solutions with CEP</b>	<b>143</b>
<b>8 The RAPIDE Pattern Language</b>	<b>145</b>
8.1 Event Pattern Languages—Basic Requirements	146
8.2 Features of RAPIDE	147
8.3 Types	148
8.3.1 Predefined Types	149
8.3.2 Structured Types	150

---

8.3.3 Event-Types	151
8.3.4 Execution Types	153
8.3.5 Subtyping of Executions	155
8.4 Attributes of Events	155
8.5 Basic Event Patterns	157
8.6 Placeholders and Pattern Matching	158
8.6.1 Matching Basic Event Patterns	159
8.6.2 Placeholder Bindings	159
8.6.3 Notation to Aid in Writing Patterns	161
8.7 Relational Operators and Complex Patterns	163
8.7.1 Relational Operators	165
8.8 Guarded Patterns	167
8.8.1 Content-Based Pattern Matching	167
8.8.2 Context-Based Pattern Matching	168
8.8.3 Temporal Operators	169
8.9 Repetitive Patterns	169
8.10 Pattern Macros	172
8.11 Summary	174
<b>9 CEP Rules and Agents</b>	<b>175</b>
9.1 Overview	176
9.2 Event Pattern Rules	177
9.2.1 Definition of Event Pattern Rules	178
9.2.2 Rule Bodies	178
9.2.3 Context and Visibility Laws	179
9.2.4 Semantics of Event Pattern Rules	180
9.2.5 Examples of Rules	182
9.3 Event Processing Agents	184
9.3.1 Definition of EPAs	184
9.3.2 Semantics of EPAs	185
9.4 Event Pattern Filters	187
9.4.1 Definition of Filters	187
9.4.2 Semantics of Filters	188
9.4.3 Action Name Filters	190
9.4.4 Content Filters	191
9.4.5 Context Filters	191
9.5 Event Pattern Maps	192
9.5.1 Definition of Maps	193
9.5.2 Semantics of Maps	193
9.6 Event Pattern Constraints	195
9.6.1 Definition of Constraints	195

---

9.6.2 Semantics of Constraints	195
9.6.3 Examples of Constraints	199
9.7 Other Classes of EPAs	204
9.8 Summary	205
<b>10 Event Processing Networks</b>	<b>207</b>
10.1 Common Structures of EPNs	208
10.1.1 Flexibility of Event Processing Networks	211
10.2 Connecting Event Processing Agents	212
10.2.1 Basic Connections	212
10.2.2 Guarded Connections	214
10.2.3 Multiple Basic Connections	215
10.3 Dynamic Event Processing Networks	216
10.3.1 Class Connections	216
10.3.2 Creation and Termination Rules	217
10.3.3 Connection Generators	218
10.4 Architectures and Event Processing Networks	221
10.4.1 Architecture Classes	222
10.4.2 Semantics of Architecture Classes	222
10.5 Examples of EPNs and Architectures	224
10.6 Case Study: EPNs for Network Viewing	230
10.6.1 Visual Tools for Constructing EPNs	234
10.6.2 Security	235
10.6.3 Scalability	235
10.7 Summary	235
<b>11 Causal Models and Causal Maps</b>	<b>239</b>
11.1 Causality between Events, Revisited	240
11.2 Why We Need Causal Models	242
11.3 What Causal Models Are	243
11.4 Defining a Causal Model and a Causal Map	244
11.5 Using Pattern Pairs to Specify Causal Models	246
11.5.1 Using Causal Rules	247
11.5.2 Resolving Ambiguities	248
11.6 Causal Maps	250
11.6.1 A Small Example of a Causal Map	252
11.6.2 A Second Example of a Causal Map	253
11.7 Developing Accurate Causal Models	258
11.8 Summary	260

<b>12 Case Study: Viewing Collaboration between Business Processes</b>	<b>261</b>
12.1 A Collaborative Business Agreement	262
12.2 An Interface Communication Architecture	264
12.3 Causal Model	265
12.4 Causal Map	265
12.5 Examples of Causal Rules	267
12.6 Examples of Constraints	269
12.7 Analysis of Examples of Posets	269
12.8 Constraint Checking Becomes Part of the Collaboration	274
<b>13 Implementing Event Abstraction Hierarchies</b>	<b>277</b>
13.1 The Accessible Information Gap	278
13.2 Event Abstraction Hierarchies, Revisited	280
13.2.1 Induced Causality	282
13.2.2 Abstraction Effect on Constraints	282
13.2.3 Modifiability	283
13.3 Bridging the Information Gaps	285
13.4 Steps to Apply a Hierarchy to a Target System	286
13.5 A Hierarchy for a Fabrication Process	287
13.5.1 Personal Views	288
13.5.2 Implementation	290
13.5.3 Diagnostics	290
<b>14 Case Study: Viewing a Financial Trading System</b>	<b>293</b>
14.1 A Small Stock-Trading System	294
14.2 The Information Gap for STS	296
14.3 An Event Abstraction Hierarchy for STS	298
14.4 Building the Event Abstraction Hierarchy	299
14.4.1 Level 1	300
14.4.2 Level 2	301
14.4.3 Level 3	311
14.5 Implementing Hierarchical Viewing for STS	316
14.6 Three Steps toward Human Control	319
14.6.1 Drill-Down Diagnostics	320
14.6.2 Detecting Constraint Violations	324
14.6.3 The Abstraction Effect	326
14.7 Summary	327

---

<b>15 Infrastructure for Complex Event Processing</b>	<b>329</b>
15.1 Examples of Forms of Observed Events	330
15.2 Interfacing CEP Infrastructure to Target Systems	335
15.3 CEP Adapters	336
15.4 CEP Runtime Infrastructure	339
15.5 Infrastructure Interfaces and Components	340
15.5.1 Functionality of the Interface	341
15.6 Off-the-Shelf Infrastructure	343
15.7 Event Pattern Languages	346
15.8 Complex Event Pattern Matchers	348
15.8.1 Quest for Scalability	348
15.8.2 The Naive View of Pattern Matchers	348
15.8.3 What Pattern Matchers Really Do	348
15.8.4 Design Structure	349
15.9 Rules Management	351
15.10 Analysis Tools	353
15.11 Summary	356
<i>Bibliography</i>	<i>357</i>
<i>Index</i>	<i>359</i>

Recently, there has been a lot of events related to Power Simulator. These events connect to some new storylines regarding the NPC heroes/villains. Here are some short summaries of the events that are happening. When the event for Update 1 part 2 went live, everybody could see the camera focusing on the floating ball platform that was the event timer. which then explodes while Pyro flies out of the explosion. Many meteors fly out of the area, landing on many grassy land, towns, and hills. The game The Power of Events is a compilation of systematic processes that can guide you in planning your...Â The book gives an insight into the fascinating world of events. If you're a pro, you can relate. If ...you're a novice, you'll learn a great deal.
